

■ ■ Automated Oil Stock Trading Bot

Revolut Hungary Edition • Technical Setup, Schedule & Operational Playbook

1. System Overview & Revolut Hungary Universe

This bot is an institutional-grade, multi-factor algorithmic trading system designed specifically for **Revolut users in Hungary**. It monitors physical crude commodity dynamics and breaking news headlines 24/7 in the cloud, calculating high-conviction buy/exit signals and pushing instant notifications to your phone.

Symbol	Company Name	Revolut Availability	Role in Strategy
XOM	ExxonMobil Corp.	Direct Stock (US)	Integrated supermajor, global refining leader
CVX	Chevron Corp.	Direct Stock (US)	Upstream exploration leader, high cash return
OXY	Occidental Petroleum	Direct Stock (US)	Permian basin pure-play, high crude beta
COP	ConocoPhillips	Direct Stock (US)	Low-cost E&P exploration bellwether
BP	BP p.l.c.	Direct Stock (US/UK)	High dividend yield, European international leader
SHEL	Shell plc	Direct Stock (US/UK)	Global LNG & integrated commercial trading giant
CL=F	WTI Crude Futures	Macro Data Anchor	Physical commodity benchmark (used for news & trend confirmation)

2. Quantitative Strategy & Risk Management Rules

The bot enforces strict multi-factor rules before dispatching any trade notification to prevent bad advice:

Factor	Rule / Condition	Purpose & Risk Guardrail
Trend Direction	Fast EMA(12) > Slow EMA(26)	Ensures stock is already moving up in a bullish regime.
Momentum	MACD Line > Signal & Hist > 0	Verifies buying momentum is actively accelerating.
Exhaustion Filter	45 <= RSI <= 75	Blocks buying into overbought blow-offs or oversold traps.
Commodity Anchor	WTI Crude Futures (CL=F) Bullish	Guarantees physical crude market confirms the equity move.
News Catalyst	Gemini LLM Sentiment Score >= +0.15	Ensures news events genuinely support physical tightness.
Stop Loss	2.5x ATR below execution price	Hard volatility-adjusted stop; caps risk at 2-3% capital.
Profit Management	Ratchet Trailing Stop (2.5x ATR)	Automatically locks in profits as price hits new highs.
Capital Sizing	25% per qualified stock	Max 85% total equity invested in high-conviction periods.

3. Dual-Engine AI Intelligence & Fallback Architecture

Engine 1: Google Gemini LLM (Primary Context Engine)

Analyzes breaking headlines using a specialized quantitative commodity analyst prompt. It evaluates OPEC quota discipline, EIA inventory surprises (unexpected builds vs draws), and geopolitical transit chokepoints (Strait of Hormuz, Red Sea). It outputs a 1-2 sentence executive explanation sent directly to your phone.

Engine 2: Energy Domain Lexicon (Automatic 100% Uptime Fallback)

If no API key is set or if rate limits occur, the bot seamlessly switches to a tailored physical supply/demand lexicon. Every

push notification explicitly declares whether it used **[Gemini LLM]** or **[Fallback Lexicon]**.

4. 24/7 Cloud Architecture & Schedule (GitHub Actions)

The bot runs completely in GitHub's cloud infrastructure via `.github/workflows/scanner.yml`. **It operates 24/7 even when your MacBook lid is closed, asleep, or turned off.**

Schedule Window	Cron Expression	Frequency	Operational Focus
US Regular Trading Hours	*/30 13-22 * * 1-5	Every 30 mins (Mon-Fri)	Intraday price action, technical crossovers, and morning EIA
Off-Market & Weekends	0 */2 * * 0,6	Every 2 hours	Weekend OPEC+ quota summits, geopolitical strikes, pipeli
Manual Trigger	workflow_dispatch	On Demand	Triggerable anytime from your GitHub Actions web dashboa

5. Notification Setup & Privacy Guide (ntfy.sh)

Active Channel Name: buzi-bot (Web URL: <https://ntfy.sh/buzi-bot>)

How ntfy Security & Privacy Works:

On the free public ntfy.sh server, topics operate like unlisted YouTube videos or radio channels. There is no 'password' or registration required; anyone who guesses the exact topic string can subscribe. Because buzi-bot is a custom name you selected, only people who know that exact string can see it.

To Guarantee 100% Cryptographic Exclusivity:

If you want absolute secrecy where no human can ever guess your channel, use a random 8-character suffix (for example: buzi-bot-8f92a). Simply update your phone app subscription and update the NTFY_TOPIC secret in your GitHub repository.

6. Revolut Operational Playbook

When You Receive a BUY Alert:

1. Open your **Revolut** app \$ ightarrow\$ **Invest** \$ ightarrow\$ Search ticker (e.g. **XOM**).
2. Tap **Buy** (Market or Limit order at the alert execution price).
3. Note the **Stop Loss** price from your alert. (You can set a Stop Order on Revolut or watch for the bot's EXIT alert).

When You Receive an EXIT Alert:

1. Open Revolut \$ ightarrow\$ Tap your open position \$ ightarrow\$ Tap **Sell** \$ ightarrow\$ **100%**.
2. The bot has detected trend exhaustion, MACD rollover, or trailing stop trigger. Capital returns safely to cash.
